

The Mango

Mango is a palatable fruit. Mango trees bear fruits generally once a year. There are a few mango trees in my garden as well.

When a mango fruits is ripe it gives a sweet smell and the juice is very tasty. The juice of the young mango is sour.

Not only children some birds also love to eat ripe mangoes. Now a days mango fruits are very expensive. Some people import mangoes. But they are not so tasty and palatable as mangoes in our country.
